RELEASE NOTICE FOR SWARGROOVE

Version 3.2 Build 0

Platform	Improvement
Win/Mac	Separation between instrument and voices; you now select an instrument in a track and can then scroll through the available voices for that instrument.
Mac	AAX plugin (Pro Tools) now includes native Silicon binaries.
Win/Mac	Supports the new round-robin drums.
Win/Mac	Removed mono configuration, as we need stereo channels for panning the tracks.

Version 3.1 Build 3

Platform	Improvement
Win	Fixed issue crashing the plugin on certain higher scaling (DPI)
Win	Fixed issue where certain buttons needed to be clicked slightly below

Version 3.1 Build 2

Platform	Improvement
Win/Mac	Various bugs fixed
Win/Mac	Help now links to new, context-based user guide

Version 3.1 Build 1

Platform	Improvement
Win/Mac	Fixes a bug that was hanging Protools under certain conditions.
Win/Mac	Changes on iterations and duration were not always registered.

Version 3.1 Build 0

Platform	Improvement
Win/Mac	New grooves browser pane with audio preview of each groove, to make it easier to select the one you need
Win/Mac	Fixes an issue on bouncing that was sometimes crashing the host
Win/Mac	New groove now asks for file name and location up front, in order to automatically save when exiting

Version 3.0 Build 1

Platform	Improvement
Win/Mac	Uses new MLP7 drums if present
Win/Mac	Controls are again resettable by double-click or Alt (Ctrl on Windows) click
Win/Mac	Mouse wheel enabled in Loop Editor
Win/Mac	SYNC TO HOST button state saved across sessions
Mac	Universal plugin. Now also works natively on new Silicon Macs (M1)

Version 3.0 Build 0

Platform	Improvement
Win/Mac	New, improved look & feel, with resizable interface.
Win/Mac	Loop Editor: you can now create your own loops by clicking on the strokes of the drum as the loop plays. You can also trigger these strokes from keyboard keys.
Win/Mac	Loop Editor: added metronome
Win/Mac	Loop selection screen: loops now split between folders and items, for clarity
Win/Mac	Loop selection screen: you can now play the loop in its natural tempo, as well as in sync with the groove sequence.
Win/Mac	Bug fixing

Version 2.1 Build 10

Platform	Improvement
Win/Mac	Fixes some cracks in the sound that can happen on some DAWs.

Version 2.1 Build 9

Platform	Improvement
Win/Mac	Some CPU optimisation.

Version 2.1 Build 8

Platform	Improvement
Win/Mac	Some fixes dealing with the new SwarPlug VST3 plugin in the background.

Version 2.1 Build 7

Platform	Improvement
Win/Mac	Adapted to work with SwarPlug 4. Also removed specific unlocking (only requires SwarPlug to be activated).

Version 2.1 Build 6

Platform	Improvement
Win/Mac	Fixed an issue where the groove was not properly refreshed on the screen when dragging it through ProTools inserts slots.

Version 2.1 Build 5

Platform	Improvement
Win/Mac	Corrected a bug in the bounce (save as audio file) functionality that was exporting to a slightly different BPM.
Win/Mac	Now when SYNC TO HOST is pressed, the host BPM fully replaces the default BPM for audition and bouncing.

Version 2.1 Build 4

Platform	Improvement
Win/Mac	Corrected a bug that was un-syncing the tracks in a groove when deleting specific sequences.
Win/Mac	In the MIDI loop editor, the vertical scrollbar was overlapping the zoom out button, making it inaccessible.

Version 2.1 Build 3

Platform	Improvement
Win/Mac	Custom tracks: MIDI was only output for the last unmuted track.
Win/Mac	Removed noise when pressing SYNC TO HOST button or resuming playback (requires SwarPlug v 3.0.4 or greater)
Win/Mac	Fixed crash when dragging a sequence past the first line.

Version 2.1 Build 2

Platform	Improvement
Win/Mac	Now displays value of each control when it's being changed.
Win/Mac	Ctrl (Alt on Mac) + click resets a control to its default value.
Win/Mac	Corrected a bug that was bypassing track effects from last update.
Win/Mac	Effects with more than 2 in/out channels are now really accepted;-)
Win/Mac	No longer crashes when a second instance of the plugin is created, though only the first one works (singleton plugin).

Version 2.1 Build 1

Platform	Improvement
Win/Mac	200+ grooves added, each with 2 intros, 2 endings, 4 varieties and 4 fills!
Win/Mac	Added "Custom" instrument tracks that can hold MIDI loops for playing along the Swar tracks (through plugin MIDI output)
Win/Mac	Enhanced MIDI editor
Win/Mac	Added drag & drop of MIDI loops into the track sequences (cells)
Win/Mac	You can now drag the track image as a MIDI file of the whole track to be dropped in your sequencer or hard drive.
Win/Mac	Effects with more than 2 in/out channels are now accepted

Win/Mac	Setting the sequence iterations to 0 skips the line.
Win/Mac	Double-clicking the track name lets you change the channel number for that track, in the MIDI output.
Win/Mac	Remembers the folder where the last groove was opened.
Win/Mac	A few bugs fixed and screens enhanced

Version 2.0 Build 2

Platform	Improvement
Win/Mac	Bug fixing: last groove was not remembered when reopening a session.
Win/Mac	Bug fixing: option for scanning VST/AU effects was disabled

Version 2.0 Build 1

Platform	Improvement
Win/Mac	Ported to 64 bits, AAX and new SwarPlug 3

Version 1.2 Build 1

Platform	Improvement
Win/Mac	Changed the unlocking system. Ask us for your personal Product Key.

Version 1.1 Build 2

Platform	Improvement
Mac	RTAS version was crashing when updating the iteration/duration fields.

Version 1.1 Build 1

Platform	Improvement
Win/Mac	New (Piano-roll) loop editor screen to edit a loop at event level.
Win/Mac	New bounce to audio file feature.
Win/Mac	New screen for combining full/part of loops.
Win/Mac	You can now move or copy a complete row by dragging it to the required location
Win/Mac	Corrected a bug preventing typing values on certain sequencers (Cubase 5, ...).
Win/Mac	Added tooltips on each control.
Win/Mac	New track loop popup menu with possible actions. Added renaming of a loop.
Win/Mac	You can now copy/paste a loop on another sequence.
Win/Mac	Improved contrast of loops background
Win/Mac	New groove file structure, as a .sgz compressed archive.
Win/Mac	Automatically adds .mid extension when not specifying it on Save as MIDI
Win/Mac	Improved performance on RTAS version.

Version 1.0 Build 4

Platform	Improvement
Win/Mac	Corrected a bug that was crashing the host when playing certain loops of Bass Dholak.
Win/Mac	Corrected a bug that was playing some new loops in a desynchronized way.

Version 1.0 Build 3

Platform	Improvement
Win/Mac	Corrected a few bugs that were creating problems on some remaining instruments (Bells, Duggis and Tambourines).

Version 1.0 Build 2

Platform	Improvement
Win/Mac	Corrected a bug that was preventing the reopening of grooves where Gunghroo tracks were added.
Win/Mac	Removed memory leak when adding effects.
Win/Mac	Corrected a bug that was adding loops on new tracks in a desynchronized way
Win/Mac	New loop names were partly trimmed when reopening a base
